

Printing on Mac OS X

These instructions apply to Mac OS X.

Requirements

Prior to configuring the printer, please download and install the driver for the FollowMe printing system:

[FollowMe Driver for Mac OS X](#)

Configuration

To configure the FollowMe printing system go to the "Print & Fax" tab in the "System Preferences" and click the plus sign below the (probably non-empty) list of printers:

Then right-click the toolbar, select "Customize Toolbar...", ...

...and drag the icon labeled "Advanced" to the toolbar:

Confirm your changes to the toolbar arrangement by clicking "Done". Click "Advanced" and enter the information as follows:

"25C-1" in the list below "Select a driver to use..." refers to the printer (drivers) you installed before going through this fancy tutorial. Click "add" and select the "Installable Options" as shown in the next screenshot:

End this plethora of clicks by clicking "Continue". If nothing went wrong, the printer "nabo.bfh.ch" appears in the list of printers:

To print from within Mac OS X you have to enter your BFH username (abbreviation) and the corresponding password in the printing dialog:
